

24-Port Gigabit Ethernet Web Managed Switch

English User's Manual

FCC Certifications

This Equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received; including interference that may cause undesired operation.

CE Mark Warning

This equipment complies with the requirements relating to the EMC Directive 2004/108/EC, the Low Voltage Directive 2006/95/EC, and the RoHS Directive 2011/65/EU.

Company has an on-going policy of upgrading its products and it may be possible that information in this document is not up-to-date. Please check with your local distributors for the latest information. No part of this document can be copied or reproduced in any form without written consent from the company.

I. Introduction to the Web Smart Switch

1.1 General Description

High Performance

The device is a powerful, high-performance Gigabit Ethernet switch with 24 10/100/1000 Mbps ports, providing you a cost-effective, space-saving solution for expanding your network. The gigabit ports can lead you to a real gigabit connection, making you be able to transfer high bandwidth-needed files higher and faster in an easy way.

This device provides the easy management function through the Ethernet Web. The network administrator can configure the status and the port function setting of the device through the Web-Based UI. When installing the auto-discovery management tool helps network managers to search and access those switches on LAN easily. Therefore, network managers can access switches that support auto-discovery on LAN without memorizing IP address.

Smart Features

The device provides rich features including Link Aggregation, VLANs, IGMP Snooping, Port Trunking, Spanning Tree, Security and other network management to meet the requirements evolving medium and small-sized enterprises. QoS secures the bandwidth for some bandwidth-demanded applications including VoIP or video conference. Additionally, IEEE 802.3az Energy Efficient Ethernet ability is supported to promise operation in Low Power Idle Mode and save power consumption.

Easy Installation and Management

This switch is plug & play and hassle-free in installation. Auto-MDI/MDI-X crossover on all ports eliminates the need for crossover cables for connection to another switch or hub. Auto-Negotiation on each port senses the link speed of a network device and intelligently adjusts for compatibility and optimal performance. This switch also features diagnostic LEDs, which display the status and activities of the network.

1.2 The Front Panel

The following figure shows the front panel of the switch.

The following table describes the port labels on the front panel.

LABEL	DESCRIPTON
24 10/100/1000 RJ-45 Ethernet Ports	Connect these ports to a computer, a hub, an Ethernet switch or router

1.3 LEDs Definition

This device provides extensive leds to show the activities on power, system and ports.

See the following description for your reference:

LED	Status	Operation
PWR	Steady Green	The switch is powered on.
	Off	The switch is powered off.
SYS	Steady Green	The switch is on and functioning properly.
	Blinking Green	The switch is rebooting and performing self-diagnostic tests.
	Off	The power is off or the system is not ready/malfunctioning.
Link/ACT	Steady Green	The link to a 1000 Mbps Ethernet network is up.
	Blinking Green	The system is transmitting/receiving to/from a 1000 Mbps Ethernet network.
	Off	Port disconnected.

The RESET Button

Reset the switch to its factory default configuration via the RESET button. Press the RESET button for three seconds and release. The switch automatically reboots and reloads its factory configuration file. The RESET button is on the front panel of the switch.

1.4 The Rear Panel

The following figure shows the rear panel of the switch:

Power Receptacle

To be compatible with the electric service standards around the world, the switch is designed to afford the power supply in the range from 100 to 240 VAC, 50/60 Hz. Please make sure that your outlet standard to be within this range.

To power on the switch, please plug the female end of the power cord firmly into the receptacle of the switch, the other end into an electric service outlet, and use the **POWER ON/OFF** switch to have the Switch power on or off. After the switch powered on, please check if the power LED is lit for a normal power status.

1.5 Installation

This switch can be placed on your desktop directly, or mounted in a rack. Please refer to the instructions for installation.

Before installing the switch, we recommend:

1. The switch is placed with appropriate ventilation environment. A minimum 25 mm space around the unit is recommended.
2. The switch and the relevant components are away from sources of electrical noise such as radios, transmitters and broadband amplifiers
3. The switch is away from environments beyond recommend moisture

Desktop Installation

1. Install the switch on a level surface that can support the weight of the unit and the relevant components.
2. Plug the switch with the female end of the provided power cord and plug the male end to the power outlet.

Rack-mount Installation

The switch may be standalone, or mounted in a rack. Rack mounting facilitate to an orderly installation when you are going to install series of networking devices.

Procedures to Rack-mount the switch:

1. Disconnect all the cables from the switch before continuing.
2. Place the unit the right way up on a hard, flat surface with the front facing you.
3. Locate a mounting bracket over the mounting holes on one side of the unit.
4. Insert the screws and fully tighten with a suitable screwdriver.
5. Repeat the two previous steps for the other side of the unit.
6. Insert the unit into the rack and secure with suitable screws.
7. Reconnect all the cables.

Installing Network Cables

1. Crossover or straight-through cable: All the ports on the switch support Auto-MDI/MDI-X

functionality. Both straight-through or crossover cables can be used as the media to connect the switch with PCs as well as other devices like switches, hubs or router.

2. Category 3, 4, 5 or 5e, 6 UTP/STP cable: To make a valid connection and obtain the optimal performance, an appropriate cable that corresponds to different transmitting/receiving speed is required. To choose a suitable cable, please refer to the following table.

Media	Speed	Wiring
10/100/1000 Mbps copper	10 Mbps	Category 3,4,5 UTP/STP
	100 Mbps	Category 5 UTP/STP
	1000 Mbps	Category 5e, 6 UTP/STP

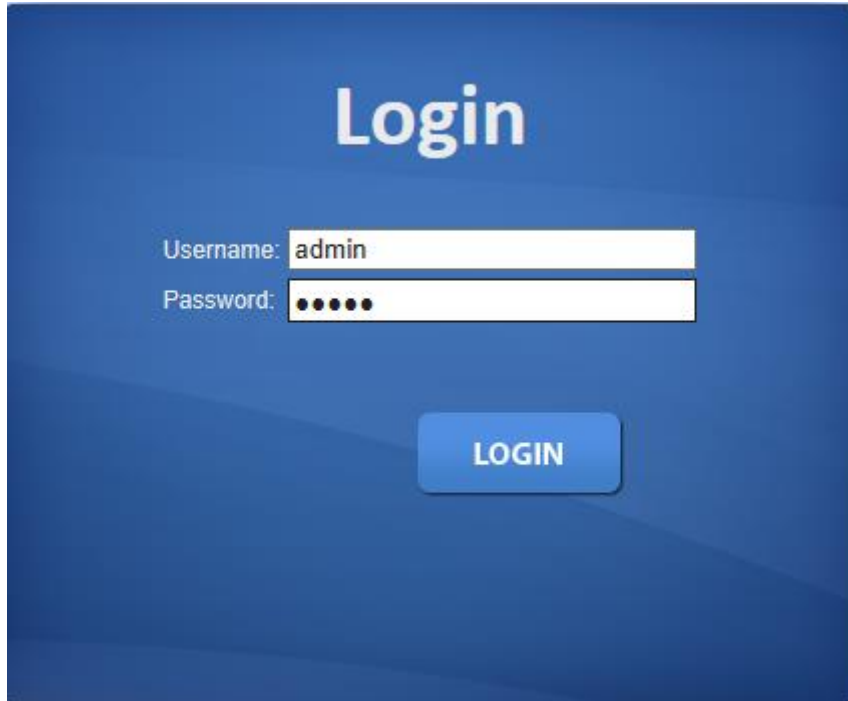

II. Basic Web Management Information

2.1 System login

1. Start your web browser.
2. Type "http://" and the IP address of the switch (for example, the default management IP address is 192.168.1.254) in the Location or Address field. Press **[ENTER]**.

3. The login screen appears. The default username and password are "**admin**", so you can click **LOGIN** and go to the web configuration screen directly.

2.2 The Graphic User Interface

After the password authorization, the information page shows up. You may click on each folder on the left column of each page to get access to each configuration page. The Graphic User Interface is as follows:

System Information

2 4 6 8 10 12 14 16 18 20 22 24
1 3 5 7 9 11 13 15 17 19 21 23

Information Name	Information Value
System Name	Edit Switch

The following table describes the links in the navigation panel.

LINKS	DESCRIPTION
Status	
System Information	This link takes you to a screen that displays general system information.

Logging Message	This sub-menu takes you to screens where you can view and setup system logs.
Port	This link takes you to a screen where you can configure the port information.
Link Aggregation	This link takes you to a screen where you review the LAG Status and the LACP Information.
LLDP Statistics	This link takes you to view the summary and per-port information for LLDP frames transmitted and received on the switch.
IGMP Snooping Statistics	This link takes you to see the statistics information of IGMP.
Network	
IP Address	This link takes you to a screen where you can configure the IP information.
IPv6 Address	This link takes you to a screen where you can configure the IPv6 information.
Management VLAN	This link takes you to view the entry of a VLAN from which a management station will be allowed to manage the device using TCP/IP (in-band via web manager or Telnet).
Time Settings	This link takes you to a screen where you can configure the switch's time settings.
Switching	
Port Setting	This link takes you to a screen where you can configure settings for individual switch ports.
Mirror	This sub-menu takes you to screens where you can copy traffic from one port or ports to another port in order that you can examine the traffic from the first port without interference.
Link Aggregation	This link takes you to a screen where you can configure the trunk settings on a port.
VLAN Management	This link takes you to a screen where you can configure the VLAN (IEEE 802.1Q) settings on a port.
EEE	This link takes you to enable or disable port EEE(Energy Efficient Ethernet) function.
Multicast	This link takes you to set multicast filtering and unknown multicast action.
Jumbo Frame	This link takes you to a screen where you can configure the Jumbo Frame size.
STP	This sub-menu takes you to screens where you can configure the STP to prevent network loops.
MAC Address Table	
Static MAC Setting	This link takes you to display and configure the Static MAC

	settings.
Dynamic Address Setting	This link takes you to configure the Dynamic Address settings.
Dynamic Learned	This link takes you to a screen where you can to view the Dynamic Address settings information.
Security	
Storm Control	This link takes you to a screen where you can limit the number of broadcast, multicast and unknown unicast and multicast packets the Switch receives per second on the ports.
Protected Ports	This link takes you to a screen to setting and revising the protected ports.
DoS	This link takes you to configure DoS setting to enable/disable DoS function and all others related in the sub-menu.
Access	This link takes you a way to access the switch.
QoS	
General	This link takes you to a screen where you can configure QoS through the sub-menu, including QoS Priorities, Port Settings, Queue Settings, CoS Mapping, DSCP Mapping, and IP Precedence Mapping.
QoS Basic Mode	This link takes you to a screen where you can configure the QoS Basic Mode through the sub-menu, including the Global Settings and the Port Settings.
Rate Limit	This link takes you to a screen where you can configure the QoS Rate Limit through the sub-menu, including Ingress Bandwidth Control, Egress Bandwidth Control, and Egress Queue.
Management	
LLDP	This link takes you to a screen where you can set and revise the LLDP.
SNMP	This link takes you to a screen where you can set and revise the SNMP.
Diagnostics	
Cable Diagnostics	This link takes you to a screen where you can do Copper test on each port.
Ping Test	This link takes you to a screen where you can do Ping test.
Ping6 Test	This link takes you to a screen where you can do Ping6 test.
Logging Setting	This link takes you to a screen where you can configure log settings.
Factory Default	This link takes you back to the factory default configuration.
Reboot Switch	This link takes you to a screen where you can reboot the switch.

Maintenance	
Backup Manager	This link takes you to a screen where you can backup the settings you have made.
Upgrade Manager	This link takes you to a screen where you can upgrade the switch settings.
Configuration Manager	This link takes you to a screen where you can save all the configurations you have made to the switch.
Account Manager	This link takes you to a screen where you can change the web configuration login account.

2.3 SAVE LOGOUT REBOOT

2.3.1 SAVE

2.3.1.1 Saving running configurations

Click **SAVE** → **Save Configuration to FLASH** to view the screen as shown next. This page allow user to copy running configuration, startup configuration or backup configuration to startup configuration or backup configuration.

Configuration Manager

Save Configuration

Source File	<input checked="" type="radio"/> Running configuration <input type="radio"/> Startup configuration
Destination File	<input checked="" type="radio"/> Startup configuration

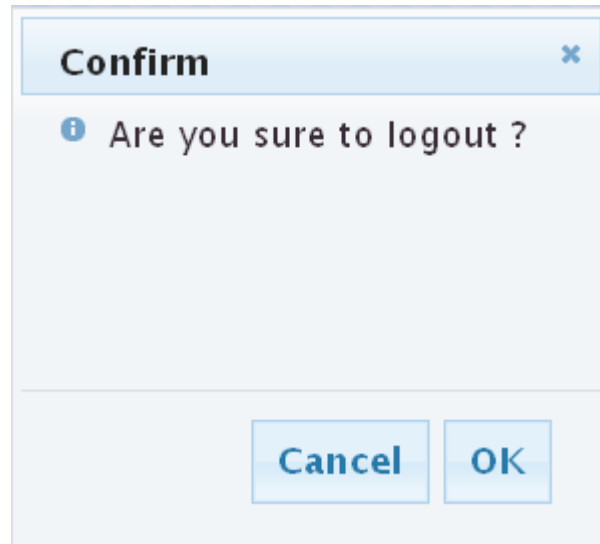

Configuration Manager Page

Configuration Manager Fields

LABEL	DESCRIPTION
Source File	Select upgrade method ■ Running configuration: Running configuration file ■ Startup configuration: Startup configuration file
Destination File	Select Upgrade Type ■ Startup Configuration: Startup configuration file

2.3.2 LOGOUT

Click **Logout** to exit the web configurator. You have to log in with your password again after you log out, if there is any. This is recommended after you finish a management session for security reasons.

2.3.3 REBOOT

Reboot allows you to restart the switch without physically turning the power off.

Follow the steps below to reboot the switch.

1. Click **REBOOT** to view the screen as shown next.

2. Click **Reboot** button, then the following interface pops up.

3. When it finished, the switch has been restarted.

III. Web Management Configuration

3.1 Status

Use the Status pages to view system information and status.

3.1.1 System Information

In the navigation panel, click **Status** → **System Information** to display the screen as shown below.

This page allow user to configure and browse some system information such as MAC address, IP address, loader version and firmware version and so on.

System Information

System Information

Information Name	Information Value
System Name	Edit Switch
System Location	Edit Default Location
System Contact	Edit Default Contact
MAC Address	00:08:54:71:6A:13

The following table describes the labels in this screen.

LAG Status Field:

LABEL	DESCRIPTION
LAG	LAG Name
Name	LAG port description
Type	The type of the LAG <ul style="list-style-type: none"> ■ Static: The groups of ports assigned to a static LAG are always active members. ■ LACP: The groups of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.
Link State	LAG port link status
Active Member	Active member ports of the LAG
Standby Member	Inactive or candidate member ports of the LAG

LACP Status Field:

LABEL	DESCRIPTION
LAG	LAG Name

Port	Member port name.
PartnerSysId	The system ID of link partner. This field would be updated when the port receives LACP PDU from link partner.
PnKey	Port key of partner. This field would be updated when the port receives LACP PDU from link partner.
AtKey	Port key of actor. The key is designed to be the same as trunk ID.
Sel	LACP selection logic status of the port. "S" means selected, "U" means unselected, and "D" means standby.
Mux	LACP mux state machine status of the port. "DETACH" means the port is in detach state, "WAIT" means waiting state, "ATTACH" means attach state, "CLLCT"
Receiv	LACP receive state machine status of the port. "INIT" means the port is in initialize state, "PORTds" means port disabled state, "EXPR" means expired state, "LACPs" means LACP disabled state, "DFLT" means defaulted state, "CRRNT" means current state.
PrdTx	LACP periodic transmission state machine status of the port. "no PRD" means the port is in no periodic state, "FstPRD" means fast periodic state, "SlwPRD" means slow periodic state, "PrdTX" means periodic TX state.
AtState	The actor state field of LACP PDU description. The field from left to right describes: "LACP_Activity", "LACP_Timeout", "Aggregation", "Synchronization", "Collecting", "Distributing", "Defaulted", and "Expired". The contents could be true or false. If the contents are false, the web shows "_"; if the contents are true, the web shows "A", "T", "G", "S", "C", "D", "F" and "E" for each content respectively.
PnState	The partner state field of LACP PDU description. The field from left to right describes: "LACP_Activity", "LACP_Timeout", "Aggregation", "Synchronization", "Collecting", "Distributing", "Defaulted", and "Expired". The contents could be true or false. If the contents are false, the web shows "_"; if the contents are true, the web shows "A", "T", "G", "S", "C", "D", "F" and "E" for each content respectively.

3.1.5 LLCP Statistics

Click **Status** → **LLDP Statistics**. The Link Layer Discovery Protocol (LLDP) Statistics page displays summary and per-port information for LLDP frames transmitted and received on the switch.

LLDP Statistics

LLDP Global Statistics

GE6	0	0	0	0	0	0	0
GE7	0	0	0	0	0	0	0
GE8	0	0	0	0	0	0	0

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Insertions	The number of times the complete set of information advertised by a particular MAC Service Access Point (MSAP) has been inserted into tables associated with the remote systems.
Deletions	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems.
Drops	The number of times the complete set of information advertised by MSAP could not be entered into tables associated with the remote systems because of insufficient resources.
Age Outs	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems because the information timeliness interval has expired.
Port	Interface or port number.
TX Frames Total	Number of LLDP frames transmitted on the corresponding port.
RX Frames Total	Number of LLDP frames received by this LLDP agent on the corresponding port, while the LLDP agent is enabled.
RX Frames Discarded	Number of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
RX Frames Errors	Number of invalid LLDP frames received by the LLDP agent on the corresponding port, while the LLDP agent is enabled.
RX TLVs	Number of TLVs of LLDP frames discarded for any reason by the LLDP

Discarded	agent on the corresponding port.
RX TLVs Unrecognized	Number of TLVs of LLDP frames that are unrecognized while the LLDP agent is enabled
RX Ageouts Total	Number of age out LLDP frames.

3.1.6 IGMP Snooping Statistics

Click **Status** → **IGMP Snooping Statistics** in the navigation panel to view the screen as shown below.

IGMP Snooping Statistics

Statistics Packets	Counter
Total RX	5015
Valid RX	4169
Invalid RX	846
Other RX	0
Leave RX	0
Report RX	0
General Query RX	0
Specail Group Query RX	0
Specail Group & Source Query RX	0
Leave TX	0
Report TX	0
General Query TX	0
Specail Group Query TX	0
Specail Group & Source Query TX	0

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Total RX	This field displays the total amount of RX
Valid RX	This field displays the total amount of valid RX.
Invalid RX	This field displays the total amount of invalid RX.
Other RX	This field displays the total amount of other RX.
Leave RX	This field displays the total amount of leave RX.
Report RX	This field displays the total amount of report RX.
General Query RX	This field displays the total amount of general query RX.
Special Group	This field displays the total amount of Special Group query RX.

Query RX	
Special Group & Source Query RX	This field displays the total amount of Special Group & Source query RX.
Leave TX	This field displays the total amount of leave TX.
Report TX	This field displays the total amount of report TX.
General Query TX	This field displays the total amount of general query TX.
Special Group Query TX	This field displays the total amount of Special Group query TX.
Special Group & Source Query TX	This field displays the total amount of Special Group & Source query TX.

3.2 Network

Use the Network pages to configure settings for the switch network interface and how the switch connects to a remote server to get services.

3.2.1 IP Address

Use the IP Setting screen to configure the switch IP address and the default gateway device. The gateway field specifies the IP address of the gateway (next hop) for outgoing traffic. The switch needs an IP address for it to be managed over the network. The factory default IP address is 192.168.1.254. The subnet mask specifies the network number portion of an IP address. The factory default subnet mask is 255.255.255.0.

Click Network → IP Address in the navigation panel to display the screen as shown below.

IP Address

IP Address Setting

Mode	<input checked="" type="radio"/> Static <input type="radio"/> DHCP
IP Address	<input type="text" value="192.168.1.254"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Gateway	<input type="text" value="192.168.1.254"/>
DNS Server 1	<input type="text" value="168.95.1.1"/>
DNS Server 2	<input type="text" value="168.95.192.1"/>

Information Name	Information Value
DHCP State	Disabled
Static IP Address	192.168.1.254
Static Subnet Mask	255.255.255.0
Static Gateway	192.168.1.254
Static DNS Server 1	168.95.1.1
Static DNS Server 2	168.95.192.1

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Mode	Select the mode of network connection <ul style="list-style-type: none"> ■ Static: Enable static IP address. ■ DHCP: Enable DHCP to obtain IP information from a DHCP server on the network.
IP Address	Enter the IP address of your switch in dotted decimal notation for example 192.168.1.254. If static mode is enabled, enter IP address in this field.
Subnet Mask	Enter the IP subnet mask of your switch in dotted decimal notation for example 255.255.255.0. If static mode is enabled, enter subnet mask in this field.
Gateway	Enter the IP address of the gateway in dotted decimal notation. If static mode is enabled, enter gateway address in this field.
DNS Server 1	If static mode is enabled, enter primary DNS server address in this field.
DNS Server 2	If static mode is enabled, enter secondary DNS server address in this field.
Apply	Click Apply to save your changes to the switch.

3.2.2 IPv6 Address

Click Network → IPv6 Address in the navigation panel to display the screen as shown below.

IPv6 Address

IPv6 Address Setting

Auto Configuration	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
IPv6 Address	<input style="width: 90%;" type="text" value="::"/> / <input style="width: 10%;" type="text" value="0"/>
Gateway	<input style="width: 90%;" type="text" value="::"/>
DHCPv6 Client	<input checked="" type="radio"/> Disable <input type="radio"/> Enable

▼ IPv6 Information

Information Name	Information Value
Auto Configuration	Enabled
IPv6 In Use Address	fe80::2e0:4cff:fe00:0 / 64
IPv6 In Use Router	::
IPv6 Static Address	fe80::2e0:4cff:fe00:0 / 0
IPv6 Static Router	::
DHCPv6 Client	Disabled

The following table describes the labels in this screen.

IPv6 Information Filed:

LABEL	DESCRIPTION
Auto Configuration	Select Enable or Disable this function.
IPv6 Address	Enter the IPv6 address of your switch. If auto configuration mode is disabled, enter IPv6 address in this field.
Gateway	Enter the IP address of the gateway in dotted decimal notation. If auto configuration mode is disabled, enter IPv6 gateway address in this field.
DHCPv6 Client	DHCPv6 client state. <ul style="list-style-type: none"> ■ Enable: Enable DHCPv6 client function. ■ Disable: Disable DHCPv6 client function
Apply	Click Apply to save your changes to the switch.

IPv6 Address Setting Filed:

LABEL	DESCRIPTION
Auto Configuration	It displays whether the auto configuration function is opened or not.
IPv6 In Use Address	It displays the in use address information of IPv6.
IPv6 In Use Router	It displays the in use router information of IPv6.
IPv6 Static Address	It displays the static address of IPv6.
IPv6 Static router	It displays the static router of IPv6.
DHCPv6 Client	It displays the DHCPv6 Client Status.

3.2.3 Management VLAN

Click **Network** → **Management VLAN** in the navigation panel to display the screen as shown below.

Management VLAN Setting

Management VLAN Setting

Management VLAN	default(1) ▼
------------------------	--------------

Management VLAN State

Config Name	Config Value
Management VLAN	1

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Management VLAN	This allows the entry of a VLAN from which a management station will be allowed to manage the device using TCP/IP (in-band via web manager or Telnet). Management stations that are on VLANs other than the one selected here will not be able to manage the Switch. The default management VLAN is VLAN 1.

3.2.4 Time Settings

Click **Network** → **Time Settings** in the navigation panel to display the screen as shown below.

System Time

System Time Setting

Enable SNTP	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
Manual Time	Year <input type="text" value="2000"/> Month <input type="text" value="Jan"/> Day <input type="text" value="1"/> Hours <input type="text" value="0"/> Minutes <input type="text" value="0"/> Seconds <input type="text" value="0"/>
Time Zone	<input type="text" value="None"/>

GE5	Edit	Enabled	DOWN	Auto	Auto	Disabled	Disabled
GE6	Edit	Enabled	DOWN	Auto	Auto	Disabled	Disabled
GE7	Edit	Enabled	DOWN	Auto	Auto	Disabled	Disabled

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Port Select	Select the port(s) from the list box that you will change the port settings for.
Enabled	Select Enable from the drop-down box to enable a port. The factory default for all ports is enabled. A port must be enabled for data transmission to occur. Select Disable to not use a port.
Speed	Port speed capabilities: <ul style="list-style-type: none"> • Auto: Auto speed with all capabilities. • Auto-10M: Auto speed with 10M ability only.

	<ul style="list-style-type: none"> • Auto-100M: Auto speed with 100M ability only. • Auto-1000M: Auto speed with 1000M ability only. • Auto-10/100M: Auto speed with 10/100M ability. • 10M: Force speed with 10M ability. • 100M: Force speed with 100M ability. • 1000M: Force speed with 1000M ability. <p>Selecting Auto (auto-negotiation) allows one port to negotiate with a peer port automatically to obtain the connection speed and duplex mode that both ends support. When auto-negotiation is turned on, a port on the switch negotiates with the peer automatically to determine the connection speed and duplex mode. If the peer port does not support auto-negotiation or turns off this feature, the switch determines the connection speed by detecting the signal on the cable and using half duplex mode. When the switch's auto-negotiation is turned off, a port uses the pre-configured speed and duplex mode when making a connection, thus requiring you to make sure that the settings of the peer port are the same in order to connect.</p>
Duplex	<p>Port duplex capabilities:</p> <ul style="list-style-type: none"> • Auto: Auto duplex with all capabilities. • Half: Auto speed with 10/100M ability only. • Full: Auto speed with 10/100/1000M ability only.
Flow Control	<p>A concentration of traffic on a port decreases port bandwidth and overflows buffer memory causing packet discards and frame losses. Flow Control is used to regulate transmission of signals to match the bandwidth of the receiving port. The switch uses IEEE802.3x flow control in full duplex mode and backpressure flow control in half duplex mode. IEEE802.3x flow control is used in full duplex mode to send a pause signal to the sending port, causing it to temporarily stop sending signals when the receiving port memory buffers fill. Back Pressure flow control is typically used in half duplex mode to send a "collision" signal to the sending port (mimicking a state of packet collision) causing the sending port to temporarily stop sending signals and resend later. Select "Enabled" to enable it. Or select "Disabled" to disable it.</p>
Apply	Click Apply to save your changes to the switch.
Flow Control Config	The Config column displays if Flow Control has been configured to be turned On or Off for the port.
Flow Control Status	The column displays the port's current Flow Control status.

3.3.2 Port Mirroring

The Mirror function copies all the packets that are transmitted by the source port to the destination port. It allows administrators to analyze and monitor the traffic of the monitored ports.

The Mirror Configuration steps are as follows:

Click **Switching** → **Mirror** → **Local Mirror Setting** in the navigation panel to display the screen as shown below.

Mirror Setting

Mirror Setting

Session ID	Select Session ▾
Monitor session state	Disable ▾
Destination Port	GE1 ▾
allow-ingress	Disable ▾
Sniffer RX Ports	Select RX Ports ▾
Sniffer TX Ports	Select TX Ports ▾

Apply

▼ **Mirror Status**

Session ID	Destination Port	Ingress State	Source TX Port	Source RX Port
1	N/A	N/A	N/A	N/A
2	N/A	N/A	N/A	N/A
3	N/A	N/A	N/A	N/A
4	N/A	N/A	N/A	N/A

The following table describes the labels in this screen.

LABEL	DESCRIPTION

LABEL	DESCRIPTION
Port Select	Select one or multiple ports to configure
Priority	Enter the LACP priority value of the port
Timeout	Select the periodic transmissions of LACP PDUs. <ul style="list-style-type: none"> ■ Long: Transmit LACP PDU with slow periodic (30s). ■ Short: Transmit LACPP DU with fast periodic (1s).
Apply	Click Apply to save your changes to the Switch.

3.3.4 VLAN Management

A virtual local area network, virtual LAN or VLAN, is a group of hosts with a common set of requirements that communicate as if they were attached to the same broadcast domain, regardless of their physical location. A VLAN has the same attributes as a physical local area network (LAN), but it allows for end stations to be grouped together even if they are not located on the same network switch. VLAN membership can be configured through software instead of physically relocating devices or connections.

3.3.4.1 Create VLAN

This page allow user to add, edit or delete VLAN settings.

Click **Switching** → **VLAN Management** → **Create VLAN** to access this screen below to configure and view VLAN parameters for the switch.

Create VLAN

VLAN Setting

VLAN LIST	VLAN Action	VLAN Name Prefix
<input style="width: 90%;" type="text"/>	<input checked="" type="radio"/> Add <input type="radio"/> Delete	<input style="width: 90%;" type="text"/>

▼ VLAN Table

VLAN ID	VLAN Name	VLAN Type	Modify
1	default	Default	<input type="button" value="Edit"/>

The following table describes the related labels in this screen.

LABEL	DESCRIPTION
VLAN LIST	Specify the VLAN list to apply the operation (add/delete/edit).
VLAN Action	Select the action of operation, To add/delete/edit the VLANs
VLAN Name Prefix	Specify the prefix string of the VLAN name for new created VLANs. This field is only available with add action.
Apply	Click Apply to save your changes to the Switch.

3.3.4.2 Interface Settings

This page allow user to configure VLAN Interface related settings.

Click **Switching** → **VLAN Management** → **Interface Settings** to access the screen below.

A PVID (Port VLAN ID) is a tag that adds to incoming untagged frames received on a port so that the frames are forwarded to the VLAN group that the tag defines.

Interface Settings

Edit Interface Setting

Port Select	Interface VLAN Mode	PVID	Accepted Type	Ingress Filtering
Select Ports	<input checked="" type="radio"/> Hybrid <input type="radio"/> Access <input type="radio"/> Trunk	1 (1 - 4094)	<input checked="" type="radio"/> All <input type="radio"/> Tag Only <input type="radio"/> Untag Only	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled

Apply	Click Apply to save any changes to the switch.

3.3.8 STP

The Spanning Tree Protocol (STP) is a network protocol that ensures a loop-free topology for any bridged Ethernet local area network.

3.3.8.1 STP Global Setting

Use the **SPT Global Setting** screen to activate one of the STP modes on the switch.

Click **Switching** → **STP** → **STP Global Setting**.

STP Global Setting

Global Setting

Enabled	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled
BPDU Forward	<input checked="" type="radio"/> flooding <input type="radio"/> filtering
PathCost Method	<input type="radio"/> short <input checked="" type="radio"/> long
Force Version	RSTP-Operation ▼

▼ **STP Informations**

Information Name	Information Value
STP	Enabled
BPDU Forward	flooding
Cost Method	long
Force Version	RSTP-Operation

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Enabled	Specify the STP status to be enabled/disabled on the switch.
BPDU Forward	Specify the BPDU forwarding action when the global STP is disabled.
Path Cost Method	Specify the Cost Method of STP.
Force Version	Set the operating mode of STP: <ul style="list-style-type: none"> ■ STP-Compatible: IEEE 802.1D STP operation. ■ RSTP-Operation: IEEE 802.1w operation.

Apply	Click Apply to save your changes to the switch.
--------------	--

3.3.8.2 STP Port Setting

This page allow user to configure general setting of STP port and browser CIST port status.

Click **Switching** → **STP** → **STP Port Setting**.

STP Port Setting

STP Port Setting

Port Select	Path Cost (0 = Auto)	Edge Port	P2P MAC	Migrate
Select Ports ▾	0	No ▾	Yes ▾	<input type="checkbox"/>

▼ **CIST Port Status**

Port	Admin Enable	Path Cost	Edge Port	P2P MAC
GE1	Enable	0	No	Yes
GE2	Enable	0	No	Yes
GE3	Enable	0	No	Yes
GE4	Enable	0	No	Yes
GE5	Enable	0	No	Yes
GE6	Enable	0	No	Yes
GE7	Enable	0	No	Yes
GE8	Enable	0	No	Yes

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Port Select	Select the port(s) to change spanning tree protocol settings for.
Path Cost	Path cost is the cost of transmitting a frame on to a LAN through that port. It is recommended to assign this value according to the speed of the bridge. The slower the media, the higher the cost. Entering 0 means the switch will automatically assign a value.
Edge Port	Set the edge port configuration: <ul style="list-style-type: none"> ■ No: Force to false state (as link to a bridge). ■ Yes: Force to true state (as link to a host).
P2P MAC	Set the Point-to-Point port configuration: <ul style="list-style-type: none"> ■ No: Force to false state.

	<ul style="list-style-type: none"> ■ Yes: Force to true state.
Migrate	Force to try to use the new MST/RST BPDUs, and hence to test the hypothesis that all legacy systems that do not understand the new BPDU formats have been removed from the LAN segment on the port(s).
Apply	Click Apply to save your changes to the switch.

3.3.8.3 STP Bridge Setting

Click **Switching** → **STP** → **STP Bridge Setting**.

STP Bridge Setting

STP Bridge Setting

Priority	32768 <input type="button" value="v"/>

3.7 Management

Use the Network pages to configure settings for the switch network interface and how the switch connects to a remote server to get services.

3.7.1 LLDP

LLDP is a one-way protocol; there are no request/response sequences. Information is advertised by stations implementing the transmit function, and is received and processed by stations implementing the receive function. The LLDP category contains LLDP and LLDP-MED pages.

3.7.1.1 LLDP Global Setting

Click **Management** → **LLDP** → **LLDP Global Setting** to display the screen as shown next.

LLDP Global Setting

Global Settings

Enabled	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Interface	This label shows the port you are viewing.
Total (Bytes)	This field displays the total in bytes.
Left to Send (Bytes)	This field displays what is left to send in bytes.
Status	This field displays whether the Switch is overloading or not.
Mandatory TLVs	This field displays how many bytes used by mandatory TLVs.
802.3 TLVs	This field displays how many bytes used by 802.3 TLVs.
Optional TLVs	This field displays how many bytes used by optional TLVs.
802.1 TLVs	This field displays how many bytes used by 802.1 TLVs.

3.7.2 SNMP

3.7.2.1 SNMP Setting

Click **Management** → **SNMP** → **SNMP Setting** to display the screen as shown next.

SNMP Setting

SNMP Global Setting

State	<input checked="" type="radio"/> Disabled <input type="radio"/> Enabled
--------------	---

▼ **SNMP Informations**

Information Name	Information Value
SNMP	Disabled

The following table describes the labels in this screen.

LABEL	DESCRIPTION
State	SNMP daemon state: Select Enabled to activate SNMP daemon. Select Disabled to not use SNMP daemon.
Apply	Click Apply to save your changes to the switch.

3.7.2.2 SNMP Community

Click **Management** → **SNMP** → **SNMP Community** to display the screen as shown next.

SNMP Community

Community Setting

Community Name	Access Right
<input type="text"/>	<input checked="" type="radio"/> read-only <input type="radio"/> read-write

Add

Community Status

No.	Community Name	Access Right	Action
1	public	read-only	Delete
2	private	read-write	Delete

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Community Name	Enter a Community string, this will act as a password for requests from the management station.
Access Right	SNMP community type: <ul style="list-style-type: none"> ■ Read-Only: Read all objects only, it can allow the SNMP manager using this string to collect information from the switch. ■ Read-Write: Read and write all objects, it can allow the SNMP manager using this string to create or edit MIBs (configure settings on the switch).
Add	Click Add to add any other community.
No	It displays the port number which in the community.
Community Name	This field displays the community strings.
Access Right	This field displays the community string's type. This will either be read-only or read-write.
Delete	Click Delete to remove any selected community strings.

3.7.2.3 SNMP Trap Host

This page allow user to add or delete SNMP trap receiver IP address and community name.

Click **Management** → **SNMP** → **SNMP Trap Host** to display the screen as shown next.

SNMP Trap Host

Trap Host Setting

IP Address	Community Name	Version
<input type="text"/>	<input type="text"/>	v1 ▾

Add

▼ **Trap Host Status**

No.	IP Address	Community Name	Version	Action
1	192.168.1.1	public	v1	Delete

The following table describes the labels in this screen.

LABEL	DESCRIPTION
IP Address	Enter the IP addresses to send your SNMP traps to.
Community Name	Enter a Community string, which is the password sent with each trap to the SNMP manager.
Add	Click Add to add any trap receiver.
IP Address	This field displays the IP address where the traps from the switch are sent.
Community Name	This field displays the password which is sent with each trap to the SNMP manager.
Version	Indicates the SNMP trap supported version. Possible versions are: <ul style="list-style-type: none"> ■ v1: Set SNMP trap supported version 1. ■ v2c: Set SNMP trap supported version 2c.
Delete	Click Delete to remove any selected trap receiver entries.

3.8 Diagnostics

Use the Diagnostics pages to configure settings for the switch diagnostics feature or operating diagnostic utilities.

3.8.1 Cable Diagnostics

3.8.1.1 Copper Test

Click **Diagnostics** → **Cable Diagnostics** → **Copper Test** to view the screen as shown next.

Copper Test

Select the port on which to run the copper test.

Port

GE1 ▾

Copper Test

Test Results

Port	Channel A	Cable Length A	Channel B	Cable Length B	Channel C	Cable Length C	Channel D	Cable Length D	Result
GE1	[Open]	0.87 (m)	[Open]	0.82 (m)	[Open]	0.81 (m)	[Open]	0.81 (m)	FAIL

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Port	The Selected Port ID.
Copper Test	Click Copper to start the test.

3.8.2 Ping Test

Click **Diagnostics** → **Ping Test** to view the screen as shown next.

Ping Test

Ping test Setting

IP Address	<input type="text"/> (x.x.x.x or hostname)
Count	<input type="text" value="4"/> (1 - 5 Default : 4)
Interval (in sec)	<input type="text" value="1"/> (1 - 5 Default : 1)
Size (in bytes)	<input type="text" value="56"/> (8 - 5120 Default : 56)
Ping Results	<div style="border: 1px solid gray; height: 100px; width: 100%;"></div>

Apply

The following table describes the labels in this screen.

LABEL	DESCRIPTION
IP Address	Enter the IP addresses of the test destination.
Count	It displays how many times to send ping request packet. Enter a number between 1 and 5 as the count and the default configuration is 4.
Interval	It displays time interval between each ping request packet. Enter a number between 1 and 5 as the interval and the default configuration is 1.
Size	It displays the size of ping packet. Enter a number between 0 and 5120 as the size and the default configuration is 56.
Ping Results	After ping finished, results will show in this field.
Apply	Click Apply to save your changes to the switch.

3.8.3 IPv6 Ping Test

Click **Diagnostics** → **IPv6 Ping Test** to view the screen as shown next.

Ping Test

Ping test Setting

IPv6 Address	<input type="text" value=""/> (XX:XX::XX:XX)
Count	<input type="text" value="4"/> (1 - 5 Default : 4)
Interval (in sec)	<input type="text" value="1"/> (1 - 5 Default : 1)
Size (in bytes)	<input type="text" value="56"/> (8 - 5120 Default : 56)
Ping Results	<div style="border: 1px solid gray; height: 100px; width: 100%;"></div>

Apply

The following table describes the labels in this screen.

LABEL	DESCRIPTION
IPv6 Address	Enter the IPv6 addresses of the test destination.
Count	It displays how many times to send ping request packet. Enter a number between 1 and 5 as the count and the default configuration is 4.
Interval	It displays time interval between each ping request packet. Enter a number between 1 and 5 as the interval and the default configuration is 1.
Size	It displays the size of ping packet. Enter a number between 0 and 5120 as the size and the default configuration is 56.
Ping Results	After ping finished, results will show in this field.
Apply	Click Apply to save your changes to the switch.

3.8.4 Logging Setting

3.8.4.1 Logging Service

Use this screen to display the switch logs.

Click **Diagnostics** → **Logging Setting** → **Logging Service** to view the screen as shown next.

Logging Settings

[Logging Settings](#)

Logging Service
 Enabled Disabled

Apply

▼ Logging Information

Information Name	Information Value
Logging Service	enabled

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Logging Service	Enable / disable logging system
Apply	Click Apply to save your changes to the switch.

3.8.4.2 Local Logging

Use this screen to display the switch logs.

Click **Diagnostics** → **Logging Setting** → **Local Logging** to view the screen as shown next.

Local Logging

[Local Logging Setting](#)

Target	Severity
<div style="background-color: #007bff; color: white; padding: 2px 10px; border-radius: 4px; display: inline-block;">Select Targets</div>	<div style="border: 1px solid #007bff; padding: 2px 10px; border-radius: 4px; display: inline-block;">emerg</div>

Apply

▼ Local Logging Setting Status

Status	Target	Severity	Action
enabled	buffered	emerg, alert, crit, error, warning, notice	Delete
enabled	console	emerg, alert, crit, error, warning, notice	Delete

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Target	Select the target to store log message Buffered: Store log messages in device buffer. All log messages will disappear after system reboot. FLASH: Store log messages in FLASH. All log messages will not disappear after system reboot.
Severity	Select severity of log messages which will be stored.
Apply	Click Apply to save your changes to the switch.
Status	It displays the status of local log settings.
Target	It displays the target you've chose.
Severity	It displays the severity status.
Delete	Click Delete to delete the target chose.

3.8.4.3 Remote Logging

This page allow user to configure remote logging server information

Click **Diagnostics** → **Logging Setting** → **Remote Logging** to view the screen as shown next.

Remote Logging

Remote Logging Setting

Server Address	Server Port	Severity	Facility
<input type="text"/>	514 (1-65535)	emerg	local0

Remote Logging Setting Status

Status	Server Info	Severity	Facility	Action

The following table describes the labels in this screen.

LABEL	DESCRIPTION
Server IP	The IP address of remote log server.
Server Port	Enter a number between 1 and 65535 as the server port.
Severity	Select severity of log messages which will be sent.
Facility	Select facility of log messages which will be sent.

Apply	Click Apply to save your changes to the switch.
Status	It displays the status of local log settings.
Server Info	It displays the server information.
Severity	It displays the severity status.
Facility	It displays the facility chose.
Action	It displays the action status.

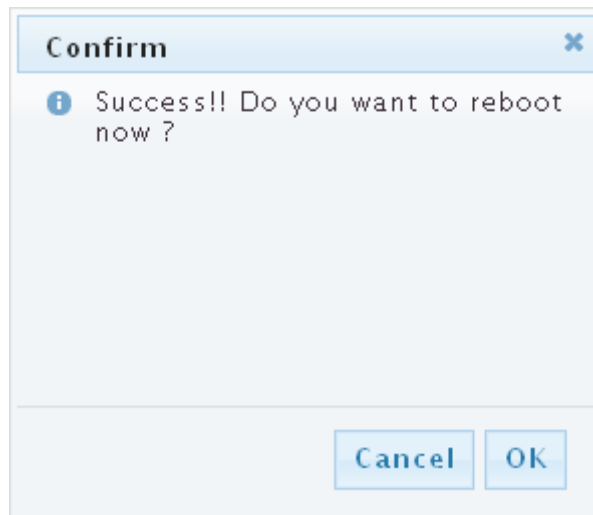

3.8.5 Factory Default

Follow the steps below to restore the switch back to the factory defaults.

1. Click **Diagnostics** → **Factory Default** to view the screen as shown next.

2. Click the **Restore** button, then the **confirm** interface pops up.

3. Click **OK** to restore all switch configurations to the factory defaults and the switch will reboot.

3.8.6 Reboot Switch

Reboot allows you to restart the switch without physically turning the power off.

Follow the steps below to reboot the switch.

1. Click **Diagnostics** → **Reboot Switch** to view the screen as shown next.

2. Click **Reboot** button, then the following interface pops up.

3. When it finished, the switch has been restarted.

3.9 Maintenance

3.9.1 Backup Manager

This page allows user to backup the firmware image or configuration file on the switch to remote TFTP server or host file system through HTTP protocol.

Click **Maintenance** → **Backup Manager** to view the screen as shown next.

Backup Manager

Backup Method	TFTP <input type="button" value="v"/>
Server IP	<input type="text"/> (IPv4 or IPv6 Address)
